

Introducing Workforce Go's Employee Navigator Integration

Workforce Go's Employee Navigator Integration is designed to eliminate manual data entry, reduce costly errors, and free your team to focus on growing your business.

What the Integration Is and What It Does

This integration connects your Workforce Go system with Employee Navigator, a rapidly growing insurance broker platform used by over 350+ of the nation's leading insurance carriers, payroll companies, and TPAs.

If your insurance broker is licensed with Employee Navigator, our integration will connect directly with theirs, autopopulating all the necessary information on the appropriate documentation, so there's no need for dual entry. The set-up is quick and easy so you can implement it right away.

Key benefits include:

- **Eliminate Dual Entry:** Data is synchronized automatically between systems.
- **Reduce Errors:** Real-time data transfer helps ensure your HR and payroll information is always current.
- **Save Time:** Experience the convenience of automatically transferring employee and benefits information.

The 4 Pillars of Seamless Integration

The integration is built on four core components, ensuring your critical employee and benefits data flows accurately and efficiently between Workforce Go and Employee Navigator.

1. Employee Demographic Sync

This component ensures comprehensive employee data is always up-to-date in both systems. It is a bi-directional sync between Workforce Go and Employee Navigator.

2. Base Compensation Sync

Compensation data is managed within your Workforce Go system, and changes are automatically flowed to Employee Navigator.

3. Employee Payroll Deduction Sync

Benefit elections and employer contributions are managed within Employee Navigator, and the benefit deduction information is transferred to Workforce Go.

4. Employee Single Sign-On (SSO)

This feature provides a best-in-class, secure experience for your employees.
